These Studies have been purposely written in the "free-style," in order that the attention may be diverted as little as possible from the pedal part. The "strict-style," with polyphonic treatment, requiring still greater independence of foot and finger.

The Pedal part should be thoroughly practised before attempting to unite it with the Manuals, and too much stress cannot be laid upon the *manner* of performance. The pipes should be made to speak by a *quick pressure* of the foot, (not a kick) even with the heaviest action. This ensures not only a quiet style of performance, but also avoids frequent disarrangement of mechanism producing "ciphering." Should the pedal pipes not speak with sufficient promptitude when the pedals are thus used, it is a fault of the builder, not the player.

The proper stops have been only generally indicated, (as the effect varies with different Organs) still, in the hands of a competent teacher, these pieces may also be usefully employed as studies in registration.

In most of the studies, besides those for the Full Organ, the pedal part should be registered slightly louder than the Manuals, and stops of 16 and 8 ft. have been intended throughout. Should the Organ have no 8 ft. stop in the pedals the effect must be obtained by coupling with the Manuals.

All of these Studies may be played upon an Organ of two keyboards and two octaves of pedals, and the author trusts that they may aid in acquiring that command of the pedals so indispensable to true Organ-playing.
